

Euky Bear™ Steam Vaporiser

• Colds & Flu • Bronchitis • Croup

Operating Instructions

IMPORTANT:

Please read carefully and save these instructions for your safety and to protect your warranty.

For most efficient operation and to maintain your unit in peak condition, always use **Euky Bear Inhalant** and **Euky Bear Vaporiser Cleaning Tablets**. See inside for further details.

 Australian Owned

Premium Safety Features

14+ Hours of Operation

5 Year Warranty

Instructions

IMPORTANT: Ensure vaporiser is unplugged during set up.

STEP 1:

Remove heating module by turning **anti-clockwise** (This does not require excessive force and can be done with one hand).

- Shake inhalant before use. Add 10mL (approx 2 capfuls) of inhalant to the water container **BEFORE** filling with water.
- **Euky Bear Vaporiser Cleaning Tablets** should be used for the first operation, then every 3rd or 4th use to keep your vaporiser in optimal condition. Place the tablet in the centre of the water container **BEFORE** filling with water. Cleaning tablets are non-toxic so they can be used during normal operation. No need to run a separate cleaning cycle.

*NOTE: In areas with hard or mineralised water, use two **Euky Bear Vaporiser Cleaning Tablets** each time the vaporiser is used.*

STEP 2:

Add water to container no higher than the level indicated on the side. **Do NOT overfill.** Maximum water level is sufficient for all night use.

- Use fresh water each time the vaporiser is used – do not “top up”. The purer the water the longer the vaporiser will operate.

STEP 3:

Replace heating module and gently turn **clockwise** into “locked” position.

STEP 4:

Position vaporiser on the floor at least 1.2 metres away from any person.

- It is best to use the vaporiser in an open, well-ventilated room, to circulate the air and prevent excess humidity.
- Make sure the cord lies flat and out of the way.
- To protect the floor or carpet, place the vaporiser on a rubber mat or other heat resistant, non-metallic barrier.
- Do **not** place vaporiser on a table, chair or other piece of furniture.
- To avoid scalding by steam, keep well clear of the steam vent.

STEP 5:

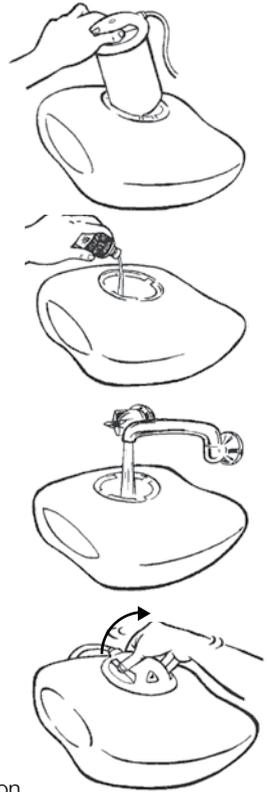

Plug into power point and turn on power. The vaporiser will produce steam within 3 to 4 minutes. Always ensure you have sufficient water for each use.

STEP 6:

Always switch off after use. Ensure vaporiser is switched off soon after steaming has finished and remove from power point. Failure to do so may void any warranty claims.

STEP 7:

Cleaning the vaporiser is very important. To help keep the unit clean and germ-free, empty the water container and rinse after each use. Do not use cleaning products. Also rinse the base of the heating module (do not submerge power cords) and dry all parts thoroughly. Continue to use **Euky Bear Vaporiser Cleaning Tablets** during regular operation.

Important Points

Automatically stops steaming:

The vaporiser will stop steaming when the heating element is no longer in contact with the water. The vaporiser may stay warm until it is turned off at the power point.

Night light: To help remind you to switch off the power after use, the night light will stay on until the power is turned off at the power point.

An important safety feature of the vaporiser is that the unique heating element has been specifically designed to avoid overheating. Overheating can be a hazard and a fire risk. Do not operate the heating module when removed from the vaporiser water tank. This may shorten the working life of the vaporiser.

Troubleshooting

1. Vaporiser trips the safety switch or blows a fuse:

Likely cause: In some households safety switches are quite sensitive when an additional load is placed on the circuit.

Solution: Turn off the vaporiser at the power point. Switch to a power point not connected to other appliances. Leave for 2 minutes. Switch on and reset to check if vaporiser is working. If not, the safety fuse in the vaporiser may have been activated. In this case contact Customer Service on 1800 655 841.

2. The vaporiser is spitting/spurting water out of the steam vent:

Likely causes:

- Inhalant added after water
- Incorrect inhalant used, too much inhalant
- Water level too high

Solutions:

- Shake inhalant bottle well **before** use
- Always add inhalant before water
- Only use Euky Bear or Bosisto's Inhalants (all water soluble)
- Use no more than 10mL (2 capfuls) of inhalant
- Ensure water level is correct or reduce to 3L

Handy Hints & Tips

Getting the most out of your Euky Bear Steam Vaporiser

- Only use Euky Bear or Bosisto's Inhalants in your vaporiser. These inhalants are water-soluble and specially formulated for your vaporiser.

- There is no need to add any other substances (ie. salt) to change the water quality as the vaporiser operates efficiently in all kinds of water.
- Always disconnect the cord from the power point before moving the unit (ie. to clean, store, fill or rinse).

3. Vaporiser producing too much steam:

Likely cause: The unit should not operate in a closed, poorly ventilated environment.

Solution: Open the door and / or window and ensure that the room has proper ventilation.

4. Vaporiser producing insufficient steam:

Likely cause: There is a build up of mineral deposits on and around the heating module (these are naturally caused by the heating of water by an electrical device).

Solution: Use **Euky Bear Vaporiser Cleaning Tablets** every 3rd or 4th use or during every operation if you are using dam or hard water. Failure to maintain this procedure may damage the unit. This may also void the warranty.

5. The vaporiser has stopped steaming but the light is still on:

Likely cause: The vaporiser will stop steaming when the heating element is no longer in contact with the water (no water in container).

The vaporiser remains on until it is turned off at the power point. To help remind you to switch off the power after use the night light will stay on.

Solution: Always switch the power off at the power source when steaming has stopped or not in use and remove plug from socket. To continue use, refill with water as per instructions.

Cleaning your Vaporiser

Cleaning your new vaporiser is easy

- After each use, empty the water container, rinse the heating module and container. Do not use cleaning products. Ensure vaporiser is dry before storing.
- Every 3rd or 4th use of the vaporiser, add one **Euky Bear Vaporiser Cleaning Tablet** to the unit. Place the tablet in the centre of the water container then add water to the container.
- In areas with hard or mineralised water, use two **Euky Bear Vaporiser Cleaning Tablets** each time the vaporiser is used.
- Cleaning tablets are non-toxic so they can be used during normal operation. There is no need to run a separate cleaning cycle.

Caution: Safety Points

1. This vaporiser is **not** intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the vaporiser by a person responsible for their safety.
2. **To avoid scalding** by steam, keep well clear of the vaporiser steam vent.
3. Children should be supervised to ensure that they do **not** play with the vaporiser to avoid the risk of scalding by steam.
4. Always disconnect the cord from the power point before filling, cleaning or moving the vaporiser.
5. **When cleaning**, do **not** fully immerse the heating module in water.
6. If supply cord is damaged, it must be replaced by the manufacturer, its service agent or similar qualified persons in order to avoid a hazard.

5 Year Warranty

This product has been produced with the greatest care for normal, household use. Following directions carefully will ensure dependable operation.

If you experience unsatisfactory operation or are dissatisfied with your **Euky Bear Steam Vaporiser** please contact our friendly Customer Service team at Felton Grimwade & Bosisto's.

Modification to the product by the consumer or failure to follow the manufacturer's operating instructions will void the warranty.

If repair is required under the warranty period, the product should be returned with proof of purchase.

The purchaser assumes responsibility for the proper care and use of the product in accordance with the printed operating manual. The purchaser or user must make his or her judgement as to when to use the product and the length of use. Keep the operating manual available as it is your guide to safe, efficient operation.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law 2011. You are entitled to a replacement of the faulty heating unit or refund for a major failure and for compensation for any other reasonable foreseeable loss or damage.
